

Bulk Ink Feed Solution

No funnels **No mess**
No pouring **No dried ink**
No spills **No problem**

Westar's new bulk ink feeding solution utilizes collapsible sealed bags. The outlet of the bag has a self-sealing valve to insure there are no leaks. All the valves have these same self-sealing valves and are opened only when the valve fittings are actually connected.

This all works together to maintain a neat and clean system where ink is not spilled on the floor or the printer.

The system is available with both 0.5 and 1.5 kilo bags. The system can easily be configured to supply one or two carts depending on the printer requirements. This makes for efficient use of the ink supply.

The bulk feed solution is designed to work with printers which have an internal bag for bulk feeds and with standard 220 type carts with an internal float valve. Both systems allow real continuous use without the need to constantly be pouring ink into a funnel.

Westar's solution also prevents contamination caused by reusing a funnel and not properly cleaning the funnel after each use.

It is handy, clean, reliable and there will be no more spills when pouring ink into a funnel.

All the valves have internal shut offs plus an optional stopcock to keep everything clean and neat.

Available with 0.5 and 1.5 kilo gram bags. Shown with a cart having an internal float valve for the constant feeding of ink.

Made in the USA

Sample installations

Roland FJ740 with 1.5 kilo bags

Mutoh RJ900 with 0.5 Kilo bags

Mutoh VJ 1624 with 1.5 kilo bags
